

**EBatt
PRO**

The technology that offers the ***POWER OF KNOWLEDGE***
for efficient battery room management.

USE BATTERIES, VEHICLES AND CHARGERS AT THEIR MAXIMUM EFFICIENCY

Easily take control of your battery room. EBatt is Enhanced Battery Asset Tracking Technology that will help you cut energy costs, improve overall battery performance, reduce the required number of batteries and chargers, and eliminate labor costs associated with unnecessary battery changing. You can know how many batteries and chargers you really need and when to maintain or replace them – all substantially reducing the costs of operating your lift truck fleet.

IMPROVED BATTERY PERFORMANCE IS A FAST AND EASY WAY TO BIG SAVINGS

Know exactly when to charge the batteries in your fleet. It takes nearly as much costly energy to fully charge a battery that is only 50% discharged as it does a battery that is 80% discharged. Charging too soon means that you're charging too often. Use EBatt and be assured that you are using all of the charge cycle of every battery every time for maximum efficiency. EBatt will also tell you which batteries are poor performers and which are performing well.

POOR PERFORMING BATTERY	
Average runtime per day	4 hours
Cost to charge	\$3.00
Charges or cycles per year	700
Total cost to operate	\$2,100

NEW BATTERY	
Average runtime per day	8 hours
Cost to charge	\$3.00
Charges or cycles per year	350
Total cost to operate	\$1,050

Look at the following chart and you'll see how quickly the cost of using bad batteries adds up.

OPERATE WITH FEWER BATTERIES

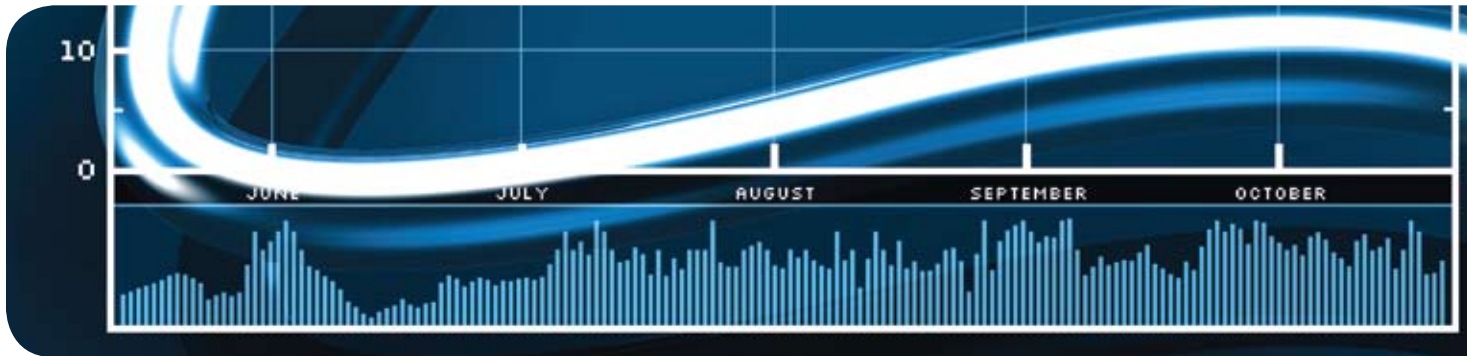

Once you start charging batteries only when necessary, you will discover that you need considerably fewer batteries to run your operation. **EBATT CAN LOWER YOUR BATTERIES PER TRUCK RATIO TO 1.8 OR LESS.**

OPERATE WITH FEWER CHARGERS

Because EBatt's reports show you detailed activity and usage trends, you can eliminate underperforming batteries, and that allows you to operate with fewer batteries and fewer batteries means fewer chargers.

ELIMINATE LABOR EXPENSE ASSOCIATED WITH UNNECESSARY BATTERY CHANGES

Taking an even bigger bite out of your bottom line is this frequently overlooked expense. EBatt will have your workers doing the important work rather than spending time in the changing process.

REPORTS PUT YOU IN CONTROL OF YOUR BATTERY ROOM

EBatt Pro will provide you with information to help streamline your operations, monitoring your chargers and recording the data that relates to the performance of your batteries, chargers and lift trucks. Unlike other battery rotation systems, EBatt Pro collects actual charging data and builds a database using that information.

From the moment your assets are placed in service, you'll have access to runtimes, rack times, change transaction durations, and time-stamped charger plug, start and finish voltages.

Know when something goes wrong by checking the Current System Status Report – a powerful tool that you can use to help diagnose the situation, saving you time and money.

And there are never any subscription fees required to retrieve your own data.

MAKE COST-SAVING DECISIONS WITH EBATT PRO

EBatt Pro will monitor and report on many facets of your battery room including batteries, chargers and lift trucks – even your operators.

EBATT IS FULLY COMPATIBLE WITH YOUR EXISTING BATTERY SYSTEM

EBatt will help you obtain maximum performance from any changing system. EBatt provides you with cost-saving information regardless of how you change batteries or what changing system to have in use.

— Save big and go GREEN with EBatt —

Not only will EBatt help you significantly reduce the amount of energy your operation consumes, but you'll eliminate many of the batteries you need for effective operation, and reduce hazardous materials on your site.

THE **UPS** AND **DOWNS** OF LIFT TRUCK BATTERY MANAGEMENT

UPS

- + Profits
- + Productivity
- + Battery performance
- + Lift truck performance
- + Successful warranty claims
- + Personnel accountability
- + Information for decisions

DOWNS

- Energy costs
- Number of batteries needed
- Number of chargers needed
- Battery-changing labor cost
 - Hazardous materials
- Floor space required for battery charging
- Management guesswork

*Efficient battery use will save **thousands of dollars**.
Take control of your battery room with EBatt.*

Manage your batteries with EBatt and stop wasted expense!
